DETAILED ACTION

Applicant's arguments are moot in view of the new ground of rejection.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-3 are rejected under 35 U.S.C. 102(e) as being anticipated by Ngo et al. (6,303,505).

Ngo et al. disclose forming a copper-containing film (13) on a semiconductor substrate (10); removing, with a cleaning agent, a copper oxide on a surface of said copper-containing film (Col. 5, lines 27-30); applying a nitriding treatment to the surface of said copper containing film from which the copper oxide has been removed (Col. 5, line 66-Col. 6, lines 7); and forming a copper diffusion prevention film (40) comprising a silicon on said copper containing film which has been subjected to the nitriding treatment (Col. 6, lines 6-15); wherein following the step of removing copper oxide on the surface of said copper containing film, the step of applying the nitriding treatment to the surface of said copper containing film is performed, without allowing the semiconductor substrate on which said copper containing film from which copper oxide

has been removed is formed to be exposed to an oxygen containing atmosphere; wherein the nitriding treatment applied to the surface of said copper containing film is effected by a plasma treatment with a source gas comprising a nitrogen element being used (Col. 6, lines 4-19).
